

Dreamweaver CC Labeling

Using this worksheet will help you to become more familiar with where things are located in Dreamweaver and what the tools look like. This sheet will serve as your reference form for Dreamweaver.

The image shows the Adobe Dreamweaver CC interface. On the left is the Code view showing HTML code for a website header and navigation menu. In the center is the Design view showing a preview of the website with a header for 'DARBY UNIVERSITY' and a navigation menu. On the right is the Structure panel showing a tree view of the document structure. At the bottom is the Properties panel showing the properties for the selected 'a' element, including 'src', 'class', 'width', 'height', and 'alt'. Six empty rectangular boxes are placed around the interface for labeling: one above the Code view, one above the Design view, one above the Structure panel, one above the Properties panel, one below the Code view, and one below the Properties panel.

The Property inspector enables you to view and change a variety of properties for the currently selected object or text. Describe the Property inspector.

The image shows a close-up of the Properties panel in Dreamweaver. The panel is titled 'Properties' and shows the properties for the selected 'a' element. The 'Image, 3K' section is expanded, showing the 'src' property set to ':ts/img/darby-logo.png', the 'Class' property set to 'logo', the 'width' property set to '237 px', the 'height' property set to '15 px', and the 'alt' property set to 'darby'. There are also fields for 'ID', 'Link', 'Map', 'Target', and 'Original'.

The Insert bar contains buttons for inserting various types of objects, such as images and tables, into a document (web page). The Insert bar contains several categories, such as Common and Layout. The Common category contains buttons for inserting the most commonly used objects.

Identify and describe the function of the buttons on the Common category in the Insert bar.
